LegalEase

4. Project Planning Phase

AI-Powered Legal Document Generator

Objective

Plan implementation activities, dependencies, testing, local deployment and future deployment.

Development Plan

- Set up Python and a virtual environment.
- Install FastAPI, Uvicorn, Streamlit, Gemini SDK and document-generation libraries.
- Create the backend and frontend folder structure.
- Configure the Gemini API key in .env.
- Implement the AI generation flow.
- Implement document formatting and export.
- Connect Streamlit to FastAPI.
- Test end-to-end document generation and downloads.

Milestones

- Milestone 1: Model Selection and Architecture.
- Milestone 2: Core Functionalities Development.
- Milestone 3: API Logic Integration.
- Milestone 4: Frontend Development.
- Milestone 5: Deployment and local verification.
- Milestone 6: Finalize and test.

Dependencies

- Python 3.10+ and pip.
- Gemini API access.
- FastAPI/Uvicorn.
- Streamlit.
- python-docx, fpdf, Pillow, requests and python-dotenv.

Deployment Planning

- Local deployment using FastAPI backend and Streamlit frontend.
- Use requirements.txt for dependency installation.
- Use .env for the Gemini API key.
- Future deployment options identified in the documentation include Render, Railway, Deta, Streamlit Community Cloud, Fly.io or a VPS.
