LegalEase

8. Project Demonstration Phase

AI-Powered Legal Document Generator

Objective

Demonstrate the complete LegalEase workflow and show the major features from user input to final document export.

Demonstration Flow

- Start the FastAPI backend.
- Start the Streamlit frontend.
- Open the LegalEase UI.
- Enter a document type such as Freelance Work Contract, NDA or Lease Agreement.
- Enter parties and roles.
- Enter semicolon-separated terms.
- Enter the effective date.
- Click Generate Document.
- Show the generated preview.
- Use the edit function to modify the content.
- Download the final document as TXT, DOCX and PDF.

Demonstration Scenarios

- Employment Contract: startup founder provides new-hire information and generates a contract with role, responsibilities, compensation and confidentiality clauses.
- NDA: freelancer enters parties, confidentiality scope and effective date to generate a structured NDA.
- Lease Agreement: landlord enters property address, tenant details and lease terms to generate a formatted agreement.

Features to Demonstrate

- AI-powered document generation.
- Editable text preview.
- Professional document formatting.
- Logo and branding support.
- Terms table in DOCX.

- PDF header/footer and branding.
- TXT/DOCX/PDF export.

Scalability & Future Plan

- Future enhancements identified in the supplied documentation include deeper contract analysis, integration with legal databases and personalized recommendations.
- The architecture is described as supporting scalability, data privacy and real-time responsiveness.

Expected Demonstration Outcome

The demonstration should show a complete working path from user input through AI generation, editing, preview and document download.
